It finds it in those other plants which,having received their energy free from the sun,relinquish it at some point in their cycle either to animals (like us humans) or to fungi. In this search for energy the fungus has become the earth's major source of not and decay. Wherever you see mold forming on a piece of bread,or a pile of leaves turning to compost,or a blown-down tree becoming pulp on the ground, you are watching a fungus eating. Without fungus action the earth would be piled high with the dead plant life of past centuries. In fact, certain plants which contain resins that are toxic to fungi will last indefinitely; specimens of the redwood, for instance, can still be found resting on the forest floor centuries after having been blown down. iv.The author is primarily concerned with?
