5	Q-3. For me,scientific knowledge is divided into mathematical sciences,natural sciences dealing with the natural world (physical and biological sciences).and sciences dealing with mankind(psychology,sociology, all the sciences of cultural achievements,every kind of historical knowledge).Apart from these sciences is philosophy,about which we will talk shortly.In the first place,all this is pure or theoretical knowledge sought only for the purpose of understanding in order to fulfil the need to understand that is irtrinsic and comsubstantial to man.What distinguishes man from animal is that he knows and needs to know.If man did not know that the world existed,and that the world was of a certain kind,that he was in the world and that he himself was of a certain kind,he wouldn't be man.The technical aspects of applications of knowledge are equally necessary for man and are of the greatest importance,because they also contribute to defining him as man and permit him to a pursue a life increasingly more truly human. But even while enjoying the results of technical progress,he must defend the primacy and autonomy of pure knowledge.Knowledge sought directly for its practical applications will have immediate and foreseeable success,but not the kind of important result whose revolutionary scope is in large part unforeseen,except by the imagination of the Utopians.Let me recall well-known example.If the Greek mathematicians had not applied themselves to the investigation of conic sections,zealously and without the least suspicion that it might someday be useful it would not have been possible centuries later to navigate far from shore.The first men to study the nature of electricity could not imagine that their experiments,carried on because of mere intellectual curiosity,would eventually lead to modern electrical technology without which we can scarcely conceive of contemporary life.Pure knowledge is valuable for its own sake,because the human spirit cannot resign itself to ignorance but in addition it is the foundation for practical results that would not have been reached if this knowledge had not been sought disinterestedly. i.The author points out that the Greeks who studied conic sections? 17	**Q-7.Observe the dialemma of the fungus: it is a plant,but it possesses no chlorophyll.While all other plants put the sun's energy to work for them combining he nutrients of ground and air into the body structure,the chlorophyllous fungus must look elsewhere for an energy supply.It finds it in those other plants which,having received their energy free from the sun,relinquish it at some point in their cycle either to animals (like us humans) or to fungi.** **In this search for energy the fungus has become the earth's major source of not and decay.Wherever you see mold forming on a piece of bread,or a pile of leaves turning to compost,or a blown-down tree becoming pulp on the ground,you are watching a fungus eating.Without fungus action the earth would be piled high with the dead plant life of past centuries.In fact,certain plants which contain resins that are toxic to fungi will last indefinitely;specimens of the redwood,for instance,can still be found resting on the forest floor centuries after having been blown down.** ii.The passage states all the following about fungi EXCEPT?
