

## ECAT Computer Science Entry Test

| Sr | Questions                                                                                                                    | Answers Choice                                                                                                               |
|----|------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| 1  | The distance of the plane $2x - 3y + 6z + 14 = 0$ from the origin is                                                         | A. 14<br>B. 2<br>C. -2<br>D. 11                                                                                              |
| 2  | The point which divides the line joining the points (2, 4, 5) and (3, 5, -4) in the ratio -2 : 3 lines on                    | A. ZOZ plane<br>B. XOY plane<br>C. YOZ plane<br>D. None of these                                                             |
| 3  | Question Image                                                                                                               | A. 0<br>B. 2<br>C. 4/3<br>D. 5/3                                                                                             |
| 4  | The projections of a line segment on x, y, z axes are 12, 4, 3. The length and the direction cosines of the line segment are |                                                                                                                              |
| 5  | The st. lines whose direction cosines satisfy $al + bm + cn = 0$ , $fmn + gnl + hlm = 0$ are perpendicular if                |                                                                                                                              |
| 6  | Question Image                                                                                                               | A. (3, 1, -2)<br>B. (3, -2, 1)<br>C. (2, -1, 3)<br>D. (-1, -2, -3)                                                           |
| 7  | The distance of the points (3, 4, 5) from y-axis is                                                                          |                                                                                                                              |
| 8  | The direction cosines of any normal to the xy-plane are                                                                      | A. $\sqrt{1, 0, 0}$<br>B. $\sqrt{0, 1, 0}$<br>C. $\sqrt{1, 1, 0}$<br>D. $\sqrt{0, 0, 1}$                                     |
| 9  | The direction cosines of a line equally inclined with co-ordinate axes are                                                   |                                                                                                                              |
| 10 | The points (5, 2, 4), (6, -1, 2) and (8, -7, k) are collinear if k is equal to                                               | A. -2<br>B. 2<br>C. 3<br>D. -1                                                                                               |
| 11 | If l, m, n are the d.c.'s of a line, then                                                                                    | A. $l^2 + m^2 + n^2 = 0$<br>B. $l^2 + m^2 + n^2 = 1$<br>C. $l + m + n = 1$<br>D. $l = m = n = 1$                             |
| 12 | Which of the following integrals can be evaluated                                                                            |                                                                                                                              |
| 13 | Question Image                                                                                                               |                                                                                                                              |
| 14 | Question Image                                                                                                               | A. $\int \sin x \cos x dx$<br>B. $\int \sin x \cos^2 x dx$<br>C. $\int \sin^2 x \cos x dx$<br>D. $\int \sin^2 x \cos^2 x dx$ |

|    |                                                                                                                         |                                                                                                      |
|----|-------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 15 | Question Image                                                                                                          | A. 0<br>B. 1<br>C. 2<br>D. 4                                                                         |
| 16 | Question Image                                                                                                          | A. Always negative<br>B. Zero<br>C. Always positive<br>D. Infinity                                   |
| 17 | If the graph of $f$ is entirely below the $x$ -axis, then the value of definite integral is                             | A. = 0<br>B. $< 0$<br>C. $> 0$<br>D. None                                                            |
| 18 | If the lower limit of an integral is a constant and the upper limit is a variable, then the integral is a               | A. Constant function<br>B. Variable value<br>C. Function of upper limit<br>D. All                    |
| 19 | The arbitrary constants involving in the solution can be determined by the given conditions. Such conditions are called | A. Boundaries<br>B. Variable separable<br>C. Initial values<br>D. None                               |
| 20 | Question Image                                                                                                          | A. $Y = -x \log x - x + c$<br>B. $Y = x \log x + x$<br>C. $Y = x \log x - x + c$<br>D. None of these |
| 21 | Question Image                                                                                                          |                                                                                                      |
| 22 | Question Image                                                                                                          |                                                                                                      |
| 23 | Question Image                                                                                                          | A. $X = 100 \sin$<br>B. $X = 10 \sin$<br>C. $X = 100 \sec$<br>D. None of these                       |
| 24 | Question Image                                                                                                          | A. A variable<br>B. A constant<br>C. 0<br>D. None of these                                           |
| 25 | Question Image                                                                                                          |                                                                                                      |
| 26 | Question Image                                                                                                          |                                                                                                      |
| 27 | Which of the following integrals can be evaluated                                                                       |                                                                                                      |
| 28 | Question Image                                                                                                          |                                                                                                      |
| 29 | Question Image                                                                                                          |                                                                                                      |
| 30 | Question Image                                                                                                          |                                                                                                      |
