

ECAT Pre Engineering MCQ's Test For English Full Book

Sr	Questions	Answers Choice
1	<p>Choose correct word or phrase that is most opposite of the word given.</p> <p>Becalmed</p>	<p>A. Genrous B. Tranquil C. In motion D. Simulated E. Inquisitive</p>
2	<p>Choose Relative Pair Of Word</p> <p>INDUSTRIOUS : HARDWORKING</p>	<p>A. Sky : Blue B. Muddy : Unclear C. Book : Reading D. Pond : Take</p>
3	<p>Halo : Saint</p>	<p>A. Moses : Commandments B. Rabble : Demagogue C. Wings : Angle D. Chariot : Fire</p>
4	<p>Acrid:</p>	<p>A. Sour B. Figure C. Acquit D. Smooth</p>
5	<p>Identify Error</p> <p>Where <u>had they all gone</u> to he often <u>pondered over</u> <u>those threads</u> he had <u>once held together</u>.<u>No error</u></p>	<p>A. A B. B C. C D. D E. E</p>
6	<p>Q.5 Recent advances in science and technology have made it possible for geneticists to find out abnormalities in the unborn foetus and take remedial action to rectify some defects which would otherwise prove to be fatal to the child. Though genetic engineering is still at its infancy, scientist can now predict with greater accuracy a genetic disorder it is not yet an exact science since they are not in a position to predict when exactly a genetic disorder will set in. While they have not yet been able to change the genetic order of the gene in germs they are optimistic and are holding out that in the near future they might be successful in achieving this feat they have however acquired the ability in manipulating tissue cells. However genetic mis-information can sometimes be damaging for it may adversely affect people psychologically. Genetic information may lead to tendency to brand some people as inferiors. Genetic information can therefore be abused and its application in deciding the sex of the foetus and its subsequent abortion is now hotly debated on ethical lines but on this issue geneticists cannot be squarely blamed though this charge has often been leveled at them it is mainly a societal problem. At present genetic engineering is a costly process of detecting disorders but scientists hope to reduce the costs when technology becomes more advanced this is why much progress in this area has been possible in scientifically advanced and rich countries like the U.S.A, U.K and Japan it remains to be seen if in the future this science will lead to the development of a race of supermen or will be able to obliterate disease from this world.</p> <p>j. At present genetic engineering can rectify all genetic disorder is it</p>	<p>A. Yes B. No C. It can do so only in some cases</p>
7	<p>Choose correct word or phrase that is most opposite of the word given.</p> <p>Tempt</p>	<p>A. Paramount B. Wish C. Abstemious D. Provoke E. Hoax</p>
8	<p>(Complete the sentence with suitable words)</p> <p>The trainee said to the manager I am not supposed to do like this</p>	<p>A. The trainee told the manager that I was not allowed to do like that B. The trainee told the manager that he is not allowed to do like that C. The trainee told the manager that he was not allowed to do like that D. The trainee told the manager that he had not allowed to do like that</p>
9	<p>Carpenter : Vise</p>	<p>A. Teller : Bank B. Golfer : Club C. Mike : Speak D. Angler : Fish</p>
10	<p>Identify Error</p> <p><u>Of the three brothers</u> <u>the elder is the most religious</u>.<u>No error</u></p>	<p>A. A B. B C. C D. D E. E</p>

11	In a <u>search</u> to further his knowledge of the unknown, man has explored the earth, the sea, and now, outer space	A. Quest B. Colloquy C. Fantasy D. Documentary
12	<p>Have you ever wondered what keeps a hot air balloon flying? The same principal that keeps food frozen in the open chest freezers at the grocery store allows hot air balloons to fly. It's very basic principle: Hot air rises and cold air falls. So while the super-cooled air in the grocery store freezer settles down around the food , the hot air in a hot air in a hot air balloon pushes up, keeping the balloon floating above the ground. In order to understand more about how this principal works in hot air balloons, it helps to know more about hot air balloons themselves. A hot air balloon has three major parts: the basket, the burner, and the envelope. The basket is where passengers ride. The basket is usually made of wicker. This ensures that it will be comfortable and add little extra weight. The burner is positioned above the passenger's heads and produced a huge flame to heat the air inside the envelope. The envelope is the colorful fabric balloon that holds the hot air. When the air inside the envelop is heated, the balloon rises. The pilot can control the up-and-down movements of the hot air balloon by regulating the heat in the envelope. To ascend, the pilot heats the air in the envelope. When the pilot is ready to land, the air in the balloon is allowed to cool and the balloon becomes heavier than air. This make the balloon descend. Before the balloon is launched, the pilot knows which way the wind is blowing. This means that she has a general idea about which wau the balloon will go. But, sometimes the pilot can actually control the direction that the balloon flies while in flight. This is because the air above the ground is sectioned into layers in which the direction of the wind may be different. So even though the pilot can't steer the balloon, she can fly higher or lower into a different layer of air. Some days the difference between the directions of the wind between layers is negligible. But other days the difference is so strong that it can actually push the balloon in a completely different direction. As used in paragraph, which is the best antonym for 'descend'?</p>	A. fall B. float C. rise D. drop
13	<p>(Complete the sentence with suitable words)</p> <p>We are not _____ going back to school</p>	A. Looking forward B. Looking forward of C. Looking forward to D. Looking forwarding on
14	The thief was apprehended, but his <u>accomplice</u> had disappeared	A. People who saw him B. Guns and knives C. Person who helped him D. Stolen goods
15	Always : Never	A. Often : Rarely B. Frequently : Occasionally C. Constantly : Frequently D. Intermittently : Causally
16	<p>Many people like to eat pizza, but not everyone knows how to make it. Making the perfect pizza can be complicated, but there are lots of ways for you to make basic version at home.</p> <p>When you make pizza, you must begin with the crust. The crust can be hard to make. If you want to make the crust yourself, you will have to make dough using flour, water, and yeast. You will have to knead the dough with your hands. If you do not have enough time to do this, you can use a prepared crust that you buy from the store.</p> <p>After you have chosen your crust, you must then add the sauce. Making your own sauce from scratch can take a long time. You have to buy tomatoes, peel them, and then cook them with spices. If this sounds like too much work, you can also purchase jarred sauce from the store. Many jarred sauces taste almost as good as the kind you make at home.</p> <p>Now that you have your crust and your sauce, you need to add the cheese. Cheese comes from milk, which comes from cows. Do you have a cow in your backyard? Do you how to milk the cow? Do you know how to turn that milk into cheese? If not, you might want to buy cheese from the grocery store instead of making it yourself. When you have the crust, sauce, and cheese ready, you can add other toppings. Some people like to put meat on their pizza, while other people like to add vegetables. Some people even like to add pineapple! The best part of making a pizza at home is that you can customize it by adding your own favorite ingredients</p> <p>In paragraph 3, the author writes, "Many jarred sauce taste almost as good as the kind you make at home." The purpose of this statement is to</p>	A. Clarify a later statement B. Provide an example C. Clarify an earlier statement D. Support the previous paragraph
17	Allusion	A. fantasy B. baseless C. delusion D. reference
18	The <u>pact</u> has been in effect for twenty years.	A. monarchy B. treaty C. trend D. lease

When we are young, we learn that tigers and sharks are dangerous animals. We

might be scared of them because they are big and powerful. As we get older, however, we learn that sometimes the most dangerous animals are also the smallest animals. In fact, the animal that kills the most people every year is one that you have probably killed yourself many times: the mosquito.

While it may seem that all mosquitoes are biters, this is not actually the case. Male mosquitoes eat plant nectar. On the other hand, female mosquitoes feed on animal blood. They need this blood to live and produce eggs. When a female mosquito bites a human being, it transmits a small amount of saliva into the blood. The saliva may or may not contain a deadly disease. The result of the bite can be as minor as an itchy bump or as serious as death.

Because a mosquito can bite many people in the course of its life, it can carry diseases from one person to another very easily. Two of the most deadly diseases carried by mosquitoes are malaria and yellow fever. More than 700 million people become sick from these diseases every year. At least 2 million of these people will die from these diseases.

Many scientists are working on safer and better ways to kill mosquitoes, but so far, there is no sure way to protect everyone in the world from their deadly bites. Mosquito nests can be placed over beds to protect people against being bitten. These nets help people stay safe at night, but they do not kill any mosquitoes. Mosquitoes have many natural enemies like bats, birds, dragonflies, and certain kinds of fish. Bringing more of these animals into places where mosquitoes live might help to cut down the amount of mosquitoes in that area. This is a natural solution, but it does not always work very well. Mosquitoes can also be killed with poisons or sprays. Even though these sprays kill mosquitoes, they may also harm other plants or animals.

Although mosquitoes may not seem as scary as larger, more powerful animals, they are far more dangerous to human beings. But things are changing. It is highly likely that one day scientists will find a way to keep everyone safe from mosquitoes and the diseases they carry.

It can be understood that the introduction of dragonflies might reduce the number of flies in a given area because dragonflies

- A. Work together with mosquitoes
- B. Kill mosquitoes
- C. Cannot be killed by poisons or sprays
- D. Attract bats

I am writing in response to response to the article "Protecting our public spaces" in issue 14, published this spring in it, the author claims that "all graffiti is public spaces." I would like to point out that many people believe that graffiti is an art form that can benefit our public spaces just as much as sculpture, fountains, or other, more accepted art forms.

People who object to graffiti usually do so more because of where it is, not what it is. They argue, as your author does, that posting graffiti in public places constitutes an illegal act of property damage. But the location of such graffiti should not prevent the images themselves from being considered genuine art.

I would argue that graffiti is the ultimate public art form. Spray paint is a medium unlike any other. Though graffiti, the entire world has become a canvas. No one has to pay admission or travel to a museum to see this kind of art. The artists usually do not receive payment for their efforts. These works of art dotting the urban landscape are available, free of charge, to everyone who passes by.

To be clear, I do not consider random words or names sprayed on stop signs to be art. Plenty of graffiti is just vandalism, pure and simple. However, there is also graffiti that is breathtaking in its intricate detail, its realism, or its creativity. It takes great talent to create such involved designs with spray paint.

Are these creators not artists just because they use a can of spray paint instead of a paintbrush, or because they cover the side of a building rather than a canvas?

To declare that all graffiti is vandalism, and nothing more, is an overly simplistic statement that I find out of place in such a thoughtful publication as your magazine. Furthermore, graffiti is not going anywhere, so might as well find a way to live with it and enjoy its benefits. One option could be to make a percentage of public space, such as walls or benches in parks, open to graffiti artists. By doing this, the public might feel like part owners of these works of art, rather than just the victims of a crime.

The writer concludes this passage by

- A. Criticizing the magazine
- B. Offering a solution
- C. Restating his position
- D. Identifying the benefits of graffiti
