

ECAT Pre Engineering MCQ's Test For English Full Book

Sr	Questions	Answers Choice
(Complete the sentence with suitable words)		
1	They decided not only to start a diet _____ join an exercise class also	A. But to B. But also to C. But D. None
2	A general pardon of political offenders	A. Parole B. Amnesty C. Forgiveness D. Clemency
3	Assent	A. put aside B. question C. dislike D. disavow
(Complete the sentence with suitable words)		
4	Student body force the college authorities _____ its curriculum guidelines for newly admitted students	A. Rewriting B. To rewrite C. Rewrite of D. For to rewrite
5	Bag and baggage:	A. All the clothing B. Without any belonging C. Leave D. With all one's belonging

Fleas are perfectly designed by nature to feast on anything containing blood. Like a shark in the water or a wolf in the woods, fleas are ideally equipped to do what they do, making them very difficult to defeat. The bodies of these tiny parasites are extremely hardy and well-suited for their job.

A flea has a very hard exoskeleton, which means the body is covered by a tough, tile-like plate called a sclerite. Because of these plates, fleas are almost impossible to squish. The exoskeletons of fleas are also waterproof of fleas are also waterproof and shock resistant, and therefore fleas are highly resistant to the sprays and chemicals used to kill them.

Little spines are attached to his plate. The spine the flea scurries through an animal's fur in – search of grooming pet tries to pull a flea off through the hair coat, these spines will extend and stick to the fur like Velcro.

Fleas are some of the best jumpers in the natural world. A flea can jump seven inches, or 150 times its own length, either vertically or horizontally. An equivalent jump for a person would be 555 feet, the height of the Washington Monument. Fleas can jump 30,000 times in a row without stopping, and they are able to accelerate through the air at an incredibly high rate – a rate which is over ten times what humans can withstand in an airplane.

- 6 Fleas have very long rear legs with huge thigh muscles and multiple joints. When they get ready to jump. They fold their long legs up and crouch like a runner on a starting block. Several of their joints contain a protein called resilin, which helps catapult fleas into the air as they jump, similar to the way a rubber band provides momentum to a slingshot. Outward facing claws on the bottom of their legs grip anything they touch when they land.

- A. Fleas extend their little spines if threatened
 B. Fleas have the ability to jump higher than humans
 C. Humans can jump higher if they consume foods containing resilin
 D. The resilin found in fleas is used to make rubber bands

The adult female flea mates after her first blood meal and begins producing eggs in

just 1 to 2 days. One flea can lay up to 50 eggs in one day and over 2,000 in her lifetime. Flea eggs can be seen with the naked eye, but they are about the size of a grain of salt. Shortly after being laid, the eggs begin to transform into cocoons. In the cocoon state, fleas are fully developed adults, and will hatch immediately if conditions are favorable. Fleas can detect warmth, movement, and carbon dioxide in exhaled breath, and these three factors stimulate them to emerge as new adults. If the flea does not detect appropriate conditions, it can remain dormant in the cocoon state for extended periods. Under ideal conditions, the entire life cycle may only take 3 weeks, so in no time at all, pets and homes can become infested.

Because of these characteristics, fleas are intimidating opponents. The best way to control fleas, therefore, is to take steps to prevent an infestation from ever occurring.

According to the passage, which of the following statements is true?

7	<p>(Complete the sentence with suitable words)</p> <p>Wheat production in Pakistan</p>	<p>A. Have taken slumps and rises in recent years B. Has been rather erratic recently C. Has been erratically lately D. Are going up and down all the patients</p>
8	<p>Several times during the session the director _____ to tell his success story to the other promotion officers</p>	<p>A. Asked he B. Asked who C. Asked him D. Asked his</p>
9	<p>(Complete the sentence with suitable words)</p> <p>Take your air conditioner back to the _____ sold it to you</p>	<p>A. Man who B. Man that C. Man whom D. Man which</p>
10	<p>Abrogate</p>	<p>A. cancel B. surrogate C. decorate D. explain</p>
11	<p>Charlatan</p>	<p>A. knowledgeable doctor B. trickster C. comedian D. senior government official</p>
12	<p>If it _____ more humid in the deserts the hot temperature would be unbearable.</p>	<p>A. has been B. is C. was D. were</p>
13	<p>What do you do with your orange peels and corn cobs after you are done eating? Most people throw them in the trash can. But food leftovers do not have to go into the trash. They are biodegradable, which means that they can be broken down by bacteria into natural materials. People who like to garden often put their fruit and vegetable scraps in a special place known as a compost pile. A compost pile is a spot outdoors where food waste can break down into compost, which gardeners use. This process takes several months. Once the compost is created, people spread this mixture in their gardens to add nutrients to the soil. The compost in the soil helps new plants grow in the garden. How do you take care of a compost pile? It needs air, water, and heat. Bacteria and other microorganisms break down the food waste into more basic elements like water and carbon dioxide. This process requires oxygen, so people use a shovel to turn compost regularly and help air reach all parts of the pile. The pile cannot dry out, so it could be covered to keep moisture in. Finally, heat speeds up the process. This means a compost pile should be in the sun for at least part of the day. Food leftovers are not the only things that turn into compost. You can also add yard waste like grass clippings, dried leaves, and straw. In fact, you should add these things to create a healthy balance in your compost. But do not add any weeds to your compost pile unless you want to grow weeds in your garden. Sometimes seeds are left behind in the compost. This can be a welcome surprise if you find a tomato plant sprouting where you had not planted one. The tomato seed was hiding in the compost, waiting to begin a new life in the garden.</p> <p>Question: People should start a compost pile if they</p>	<p>A. need compost right away B. do not like to garden C. want to put their food waste to good use D. eat oranges and corn</p>
14	<p>WIZARD : MAGICAL</p>	<p>A. king : royal B. nun : silent C. teacher : ordinary D. chef : delicious</p>
15	<p>PEBBLE : STONE</p>	<p>A. Minnow : Fish B. Car : Truck C. Dictionary : Book D. Tiger : Lion</p>
16	<p>Bucolic:</p>	<p>A. Urban B. Pastoral C. Office D. Trade</p>

17	Parts of a country behind the coast or a river's bank	<p>A. Isthmus</p> <p>B. Archipelago</p> <p>C. Hinterland</p> <p>D. Swamps</p>
18	A conscientious worker is always admired by his employer.	<p>A. careful</p> <p>B. skillful</p> <p>C. sincere</p> <p>D. obedient</p>
19	<p>Identify Error</p> <p><u>The moon</u> differs <u>from</u> the earth <u>in strange</u> way and these differences <u>create problem</u> for the scientists. <u>No error</u></p>	<p>A. A</p> <p>B. B</p> <p>C. C</p> <p>D. D</p> <p>E. E</p>
20	Asperity	<p>A. smoothness</p> <p>B. production</p> <p>C. deception</p> <p>D. lethargy</p>
