

ECAT Pre Engineering MCQ's Test For English Full Book

Sr	Questions	Answers Choice
1	Choose Relative Pair Of Word CRAVAT : NECK	A. Artist : smock B. Bib : dinner C. Muzzle : Biting D. Spats : ankles
2	<p>Recent advances in science and technology have made it possible for geneticists to find out abnormalities in the unborn foetus and take remedial action to rectify some defects which would otherwise prove to be fatal to the child. Though genetic engineering is still at its infancy, scientists can now predict with greater accuracy a genetic disorder. It is not yet an exact science since they are not in a position to predict when exactly a genetic disorder will set in. While they have not yet been able to change the genetic order of the gene in germs, they are optimistic and are holding out that in the near future they might be successful in achieving this feat. They have, however, acquired the ability in manipulating tissue cells. However, genetic mis-information can sometimes be damaging for it may adversely affect people psychologically. Genetic information may lead to a tendency to brand some people as inferiors. Genetic information can therefore be abused and its application in deciding the sex of the foetus and its subsequent abortion is now hotly debated on ethical lines. But on this issue geneticists cannot be squarely blamed though this charge has often been leveled at them. It is mainly a societal problem. At present genetic engineering is a costly process of detecting disorders but scientists hope to reduce the costs when technology becomes more advanced. This is why much progress in this area has been possible in scientifically advanced and rich countries like the U.S.A., U.K. and Japan. It remains to be seen if in the future this science will lead to the development of a race of supermen or will be able to obliterate disease from this world.</p> <p>Which of the following is the same in meaning as the word 'feat' as used in the passage?</p>	A. Process B. Focus C. Fact D. Goal
3	<p>Choose correct word or phrase that is most opposite of the word given.</p> <p>Rankle</p>	A. Fragrant B. Subordinate C. Linear D. Soothe E. Condone
4	<p>Choose correct word or phrase that is most similar to the word given</p> <p>FILTH</p>	A. Medicine B. Dirt C. Flirt D. harm E. Hygiene
5	<p>Have you ever wondered what keeps a hot air balloon flying? The same principal that keeps food frozen in the open chest freezers at the grocery store allows hot air balloons to fly. It's very basic principle: Hot air rises and cold air falls. So while the super-cooled air in the grocery store freezer settles down around the food , the hot air in a hot air in a hot air balloon pushes up, keeping the balloon floating above the ground. In order to understand more about how this principal works in hot air balloons, it helps to know more about hot air balloons themselves. A hot air balloon has three major parts: the basket, the burner, and the envelope. The basket is where passengers ride. The basket is usually made of wicker. This ensures that it will be comfortable and add little extra weight. The burner is positioned above the passenger's heads and produced a huge flame to heat the air inside the envelope. The envelope is the colorful fabric balloon that holds the hot air. When the air inside the envelop is heated, the balloon rises. The pilot can control the up-and-down movements of the hot air balloon by regulating the heat in the envelope. To ascend, the pilot heats the air in the envelope. When the pilot is ready to land, the air in the balloon is allowed to cool and the balloon becomes heavier than air. This make the balloon descend. Before the balloon is launched, the pilot knows which way the wind is blowing. This means that she has a general idea about which way the balloon will go. But, sometimes the pilot can actually control the direction that the balloon flies while in flight. This is because the air above the ground is sectioned into layers in which the direction of the wind may be different. So even though the pilot can't steer the balloon, she can fly higher or lower into a different layer of air. Some days the difference between the directions of the wind between layers is negligible. But other days the difference is so strong that it can actually push the balloon in a completely different direction. As used in paragraph 3, which is the best synonym for 'ascend'?</p>	A. move B. fly C. sink D. climb

Recent advances in science and technology have made it possible for geneticists to

find out abnormalities in the unborn foetus and take remedial action to rectify some defects which would otherwise prove to be fatal to the child. Though genetic engineering is still at its infancy, scientists can now predict with greater accuracy a genetic disorder. It is not yet an exact science since they are not in a position to predict when exactly a genetic disorder will set in. While they have not yet been able to change the genetic order of the gene in germs, they are optimistic and are holding out that in the near future they might be successful in achieving this feat. They have, however, acquired the ability in manipulating tissue cells. However, genetic mis-information can sometimes be damaging for it may adversely affect people psychologically. Genetic information may lead to a tendency to brand some people as inferiors. Genetic information can therefore be abused and its application in deciding the sex of the foetus and its subsequent abortion is now hotly debated on ethical lines. But on this issue geneticists cannot be squarely blamed though this charge has often been leveled at them. It is mainly a societal problem. At present genetic engineering is a costly process of detecting disorders but scientists hope to reduce the costs when technology becomes more advanced. This is why much progress in this area has been possible in scientifically advanced and rich countries like the U.S.A., U.K. and Japan. It remains to be seen if in the future this science will lead to the development of a race of supermen or will be able to obliterate disease from this world.

- A. Possibility of abuse
- B. It is confronted by ethical problems
- C. Increased tendency to manipulate gene cells
- D. Acquired ability to detect genetic disorders in unborn babies

Which of the following is not true of the genetic engineering movement?

7	Sheep : Flock	A. Pigs : Sty B. Fish : School C. Horse : Stall D. Buffalo : Pond
8	Choose correct word or phrase that is most opposite of the word given. Blithe	A. Despondent B. Mutinous C. Angelic D. Rigid E. Opaque
9	The college discipline committee requires that students _____ college 165 days a year	A. Are in B. Be in C. Were in D. Should in
10	Choose correct word or phrase that is most opposite of the word given. Meager	A. Minimize B. Lavish C. Sensitive D. Recover E. Flexible
11	You must dispense _____ the services of your gardener, as he is not properly working now.	A. at B. to C. in D. for
12	Travel agents will <u>confirm</u> your reservations for you free.	A. purchase B. verify C. exchange D. obtain
13	Anarchy : Order	A. Adore : Loathe B. Sonnet : Medley C. Tent : Shelter D. Finger : Nail
14	Oblivion	A. Remembrance B. Bounced C. Slaughter D. Whirlpool
15	We felt as if the ground were _____ beneath our feet.	A. Bursting B. sinking C. slipping D. smashing
16	Choose correct word or phrase that is most similar to the word given FRAGILE	A. Strong B. Grave C. Weak D. Showy
17	Identify Error Cover <u>your head</u> <u>property</u> lest you <u>may not catch cold</u> . <u>No error</u>	A. A B. B C. C D. D E. E
	Identify Error	A. A B. B C. C

18 He has assured me that he will get that work done. No error

C. C
D. D
E. E

Identify Error

19 I have not seen my family since five years No error

A. A
B. B
C. C
D. D
E. E

20 HE : HIS

A. I : me
B. they : these
C. he : him
D. she : her
