ECAT Pre Engineering MCQ's Test For English Full Book

Sr	Questions	Answers Choice
1	Choose Relative Pair Of Word STRUT : WALK	A. sweating : wrestling B. Hunter : fire C. Speech : stage D. Stammer : talk
2	Choose the correctly spelt word:	A. DOLOROUS B. DOLUROUS C. DOLOREUS D. DOLORIOUS
3	**(Complete the sentence with suitable words)** The villagers of Muzaffargarh were told to evacuate their houses _____	A. As the water rises B. When the water began to rise C. When the water begin to rise D. As the water begin to rise
4	Educational planning should aim at meeting the educational needs of the entire population of all age group. While the traditional structure of education as a three layer hierarchy from the primary stage to the university represents the core, we should not overlook the periphery which is equally important. Under modern conditions, workers need to rewind, or renew their enthusiasm, or strike out in a new direction, or improve their skills as much as any university professor. The retired and the age have their needs as well. Educational planning, in their words, should take care of the needs of everyone. Our structures of education have been built up on the assumption that there is a terminal point to education. This basic defect has become all the more harmful today. A UNESCO report entitled 'learning to Be' prepared by Edgar Faure and others in 1973 asserts that the education of children must prepare the future adult for various forms of self – learning. A viable education system of the future should consist of modules with different kinds of functions serving a diversity of constituents. And performance, not the period of study, should be the basis for credentials. The writing is already on the wall. In view of the fact that the significance of a commitment of lifelong learning and lifetime education is being discussed only in recent years even in educationally advanced countries, the possibility of the idea becoming an integral part of educational thinking seems to be a far cry. For, to move in that direction means such more than some simple rearrangement of the present organization of education. But a good beginning can be made by developing Open University programs for older learners of different categories and introducing extension services in the conventional colleges and schools. Also these institutions should learn to cooperate with the numerous community organizations such as libraries. Museums, municipal recreational programs, health services etc. According to the author, what should be the basis for awarding credentials?	A. Duration of the course B. Competence of the course teachers C. Diversity of the topic covered D. Real grasp of matter or skill
5	What are good parts of our civilization? First and fore-most there are order and safety. If today I have a quarrel with another man, I do not get beaten merely because I am physically weaker and he can knock me down. I go to law and the law will decide as fairly as it can between the two of us. Thus in disputes between man and man. Right has taken the place might. More-over, the law protects me from robbery and violence. Nobody may came and break into my house, steal my books or run off with my children. Of course, there are burglars, but they are very rare and the law punishes them whenever it catches them. It is difficult for us to realize how much this safety means. Without safety those higher activates of mankind which make up civilization could not go on. The inventor could not invent, the scientist find out or the artist make beautiful things. Hence, order and safety, although they are not themselves civilization, are things without which civilization could be impossible. They are as necessary to our civilization as the air we breathe is to us; and we have grown so used to them that we do not notice them any more than we notice the air. In disputes between man and man:	A. Right has taken the place of might B. Might has taken the place of right C. Might is right D. None of the above

6	Corpulent	A. Pallid B. Helpful C. Emaciated D. Pioneering
7	When we are young, we learn that tigers and sharks are dangerous animals. We might be scared of them because they are big and powerful. As we get older, however, we learn that sometimes the most dangerous animals are also the smallest animals. In fact, the animal that kills the most people every year is one that you have probably killed yourself many times: the mosquito. While it may seem that all mosquitoes are biters, this is not actually the case. Male mosquitoes eat plant nectar. One the other hand, female mosquitoes feed on animal blood. They need this blood to live and produce eggs. When a female mosquito bites a human being, it transmits a small amount of saliva into the blood. The saliva may or may not contain a deadly disease. The result of the bite can be as minor as an itchy bump or as serious as death. Because a mosquito can bite many people in the course of its life, it can carry diseases from one person to another very easily. Two of the most deadly diseases carried by mosquitoes are malaria and yellow fever. More than 700 million people become sick from these diseases every year. At least 2 million of these people will die from these diseases. Many scientists are working on safer and better ways to kill mosquitoes, but so far, there is no sure way to protect everyone in the world from their deadly bites. Mosquito nests can be placed over beds to protect people against being bitten. These nets help people stay safe at night, but they do not kill any mosquitoes. Mosquitoes have many natural enemies like bats, birds, dragonflies, and certain kinds of fish. Bringing more of these animals into places where mosquitoes live might help to cut down the amount of mosquitoes in that area. This is a natural solution, but is does not always work very well. Mosquitoes can also be killed with poisons or sprays. Even though these sprays kill mosquitoes, they may also harm other plants or animals. Although mosquitoes may not seem as scary as larger, more powerful animals, they are far more dangerous to human beings. But things are changing. It is highly likely that one day scientists will find a way to keep everyone safe from mosquitoes and the diseases they carry. As used in paragraph 2, minor most nearly means	A. Insignificant B. Deadly C. Frustrating D. Dangerous
8	Ally	A. foe B. colleague C. partner D. companion
9	_____, regarded as the world's oldest continuously inhabited city, is the main city of Punjab	A. The Multan B. Multan being C. Multan D. That Multan
10	Choose Relative Pair Of Word MANACLE : MALEFACTOR	A. Juvenile : delinquent B. Suave : Maniac C. Muzzle : dog D. Pinto : tether
11	Act : Stage	A. Swim : Poll B. Whale : River C. Cat : Dog D. Fish : Trout
12	Student body force the college authorities _____ its curriculum guidelines for newly admitted students	A. Rewriting B. To rewrite C. Rewrite of D. For to rewrite
13	**Choose correct word or phrase that is most opposite of the word given.** Valid	A. Laud B. Feeble C. Due D. Dump E. Cogent
14	Anger : Insult	A. Business : Judgement B. Admiration : Happiness C. Conduct : Behavior D. Appreciation : Kindness
15	Unsung	A. Celebrated B. Trite C. Humdrum D. Prosaic

16	**Choose correct word or phrase that is most similar to the word given** FALLACIOUOS	A. Quarrelsome B. Superficial C. Vindictive D. Deceptive E. Skeptical
17	Acrid:	A. Sour B. Figure C. Acquit D. Smooth
18	Oblivion	A. Remembrance B. Bounced C. Slaughter D. Whirlpool
19	There is no use _____ going there at this time.	A. At B. In C. On D. Of
20	Recent advances in science and technology have made it possible for geneticists to find out abnormalities in the unborn foetus and take remedial action to rectify some defects which would otherwise prove to be fatal to the child. Though genetic engineering is still at its infancy, scientists can now predict with greater accuracy a genetic disorder. It is not yet an exact science since they are not in a position to predict when exactly a genetic disorder will set in. While they have not yet been able to change the genetic order of the gene in germs, they are optimistic and are holding out that in the near future they might be successful in achieving this feat. They have, however, acquired the ability in manipulating tissue cells. However, genetic mis-information can sometimes be damaging for it may adversely affect people psychologically. Genetic information may lead to a tendency to brand some people as inferiors. Genetic information can therefore be abused and its application in deciding the sex of the foetus and its subsequent abortion is now hotly debated on ethical lines. But on this issue geneticists cannot be squarely blamed though this charge has often been leveled at them. It is mainly a societal problem. At present genetic engineering is a costly process of detecting disorders but scientists hope to reduce the costs when technology becomes more advanced. This is why much progress in this area has been possible in scientifically advanced and rich countries like the U.S.A., U.K. and Japan. It remains to be seen if in the future this science will lead to the development of a race of supermen or will be able to obliterate disease from this world. Why, according to the author, is genetic misinformation severely damaging?	A. The cost involved is very high B. Some people are unjustly branded as inferior C. Both A and B D. Neither A nor B
