Sr	Questions	Answers Choice
1	Atomic number of an element gives	A. the number of the electron is in its atom            B. the number of nucleons in it s atom            C. the weight of the atom of the element            D. &nbsp;the total number of elementary particles 
2	Carbon occurs in nature in the purest forms as	A. Diamond            B. Graphite            C. Carbon block             D. Coal 
3	carcinogenic chemical s are expected to cause	A. allergy             B. tuberculosis             C. cancer            D. anemia  
4	Corrosion of metal occurs	A. anode            B. cathode            C. both anode and cathode             D. none of the above 
5	Detergents produce lather wit hard water because	A. they are soluble in hard water            B. they are colorless substances             C. the calcium and magnesium salts of sulphonic acids are soluble in water            D. they form sodium carbonate with hard water 
6	Diamond is the form of carbon	A. crystalline            B. amorphous             C. chemical            D. alkaline 
7	Distillation the reduced pressure is used for liquids which have	A. Crystalline            B. amorphous             C. chemical            D. alkaline 
8	During dehydration, the substance that the body usually loses is	A. sugar            B. sodium chloride             C. calcium phosphate            D. potassium chloride 
9	Elements that shown the properties of both metals and non metals are called	A. allotrope            B. metalloids             C. alloys             D. colloids 
10	Enamel is	A. A hardened transparent coating of paint             B. a glossy coating fused tot the surface of a metal, glass or pottery            C. a king of clay mixed with pigments             D. none of above
