

## NAT II Biological Science Verbal

Sr	Questions	Answers Choice
1	If you persist in telling lies to me I shall sue you _____ slander.	A. For B. On C. With D. To
2	BOMBASTIC	A. Creative B. Selfish C. Artistic D. Polite E. Overbearing
3	<p>Anthropologists who study orangutans, distant cousins of the human race, find in the animals behavior hints of how our earliest ancestors may have lived. It has long been accepted that primates originally dwelt in the treetops and only migrated to the ground as forests began to dwindle. While to a certain extent, all primates except humans spend at least some time dwelling in trees, the orangutans, can grow as heavy as 330 pounds and live for decades, requiring copious amounts of fruits simply to stay alive. Thus, they become very jealous of the territory where they find their food. Compounding his territoriality are the breeding habits of orangulants, since females can only breed every few years and, like humans, give birth not to litters but single off-spring.</p> <p>Consequently, orangutans are solitary, territorial animals who have difficulty foraging in an part of the forest where they were not raised. Orangutans take from poachers by costumes agents undergo incredible hardship on their return to the wild. Incorrectly relocating a male orangutan is especially problematic, often ending in the animal's death at the hands of a rival who sees not only his territory but also the females of his loosely knit community under threat from an outsider. While humans, like chimpanzees, are more gregarious and resourceful then orangutans, the latter provide anthropologists with useful information about the behavior of prehomimid primates and how apelike behavior influenced out ancestors search for the food and family beneath the forest canopy.</p> <p>Which of the following are factors that the author indicates contribute to the orangutan's territoriality?</p>	A. The lack of available food and the antisocial nature of orangutans B. The orangutans need for large quantities of food and the infrequency with which it mates C. The threat posed by poachers and the orangutan's inability to protest itself from them. D. The difficulties that orangutansface when compelled to a socialize with other species such as chimpanzees E. The constant dangers that present themselves whenever one orangutans encounters another
4	SCOWL : SMILE	A. Jazz : Harsh B. Acid : Vinegar C. Tendentious : Buck D. Wine : Water E. Despair : Hope
5	Muslim alchemists tried to attain wealth by ----- copper and other base metals into gold.	A. Placing B. Coin aging C. Melting D. Transforming

The public distribution system, which provides food at low prices, is a subject of vital concern. There is a growing realization that though Pakistan has enough food to feed its masses three square meals a day, the monster of starvation and food insecurity continues to haunt the poor in our country.

Increasing the purchasing power of the poor through providing productive employment, leading to rising income, and thus good standard of living is the ultimate objective of public policy. However, till then, there is a need to provide assured supply of food through a restructured, more efficient and decentralized public distribution system (PDS).

Although the PDS is extensive – it is one of the largest such systems in the world – it has yet to reach the rural poor and the far off places. It remains an urban phenomenon, with the majority of the rural poor still out of its reach due to lack of economic and physical access. The poorest in the cities and the migrants are left out, for they generally don not possess ration cards. The allocation of PDS supplies in big cities is large than in rural areas. In view of such deficiencies in the system, the PDS urgently needs to be streamlined. In addition, considering the large food grains production combined with food subsidy on one hand and the continuing slow

starvation and dismal poverty of the rural population on the other, there is a strong case for making PDS target group oriented.

- 6 The growing salaried class is provided job security, regular income, and percent insulation against inflation. These gains of development have not percolated down to the vast majority of our working population. If one compares only dearness allowance to the employees in public and private sector and looks at its growth in the past few years, the rising food subsidy is insignificant to the point of inequity. The food subsidy is a kind of D.A. to the poor, the self-employed and those in the unorganized sector of the economy. However, what is most unfortunate is that out of the large budget of the so-called food subsidy, the major part of it is administrative cost and wastages. A small portion of the above budget goes to real consumer and an even lesser portion to the poor who are in real need.

It is true that subsidies should not become a permanent feature, except for the destitute, disabled, widows and the old. It is also true that subsidies often create a psychology of dependence and hence are habit-forming and killing the general initiative of the people. By making PDS target group oriented, not only the poorest and neediest would be reached without additional cost, but it will actually cut overall costs incurred on large cities and for better off localities. When the food and food subsidy are limited, the rural and urban poor should have the priority in the PDS supplies. The PDS should be closely linked with programs of employment generation and nutrition improvement.

Q: What, according to the passage, is the main purpose of public policy in the long run?

- A. Reducing the cost of living index by increasing supplies  
B. Providing enough food to all the citizens  
C. Good standard of living through productive employment  
D. Equalizing per capita income across different strata of society

Recent advances in science and technology have made it possible for geneticists to find out abnormalities in the unborn foetus and take remedial action to rectify some defects which would otherwise prove to be fatal to the child. Though genetic engineering is still at its infancy, scientists can now predict with greater accuracy, a genetic disorder. It is not yet an exact science since they are not in a position to predict when exactly a genetic disorder will set in. While they have not yet been able to change the genetic order of the gene in germs, they are optimistic and are holding about that in the near future they might be successful in achieving this feat. They have, however, acquired the ability to manipulate tissue cells. However, genetic mis-information can sometimes be damaging for it may adversely affect people psychologically. Genetic information may lead to a tendency to brand some people as inferiors. Genetic information can therefore be abused and its application in deciding the sex of the foetus and its subsequent abortion is now hotly debated on ethical lines. But on this issue geneticists cannot be squarely blamed though this charge has often been leveled at them. It is mainly a societal problem. At present genetic engineering is a costly process of detecting disorders but scientists hope to reduce the costs when technology becomes more advanced. This why much progress in this area has been possible in scientifically advanced and rich countries like the U.S.A., U.K., and Japan. It remains to be seen if in the future this science will lead to the development of a race of supermen or will be able to obliterate illness from this world.

Q: At present genetic engineering can rectify all genetic disorders. Is it so?

- 7 A. Yes  
B. No  
C. It can do so only in some cases  
D. Study of genetic disorders is out of scope of genetics.

- 8 TROWEL : MORTAR::  
A. Wrench : Twist  
B. Hail : Dew  
C. Salt : Recipe  
D. Spatula : Icing

- 9 The final edition of the Love and Cheating consists of six volumes; however, only a small ---- of its full volume has ever been published.  
A. Edition  
B. Volume  
C. Fraction  
D. Chapter

- 10 When the Quaid-e-Azam inaugurated the state Bank of Pakistan?  
A. 1st Sep 1947  
B. Nov 1947  
C. 1st July 1948  
D. Jan 5, 1949

- 11 The passengers were very happy \_\_\_\_\_ the friendly and warm treatment given to them  
A. From  
B. To  
C. By  
D. About

- 12 TAWDRY  
A. Marble  
B. Humidity  
C. Insolvent  
D. Elegant  
E. Awestruck

- 13 HOVEL  
A. Crowd  
B. Whisk  
C. Pudding  
D. Palace  
E. Dust

- 14 Whichever way you approach the problem  
A. It will not solve  
B. It will not be solved  
C. No one will not solve it

D. It will not be solve

15 Who inaugurated the National Bank of Pakistan.

- A. Liaqat Ali Khan
- B. Muhammad Ali Jinnah
- C. Shoaib Quraishi
- D. Sikandar Mirza

Through the U.S. prides itself on being a leader in the world community, a recent report shows that it lags far behind other industrialized countries in meeting the needs of its youngest and most vulnerable citizens. The U.S. has a higher infant mortality rate, a higher proportion of low birth weight babies, a smaller proportion of babies immunized against childhood diseases and a much higher rate adolescent pregnancies. These findings, described as a quiet crisis requiring immediate and far-reaching action, appeared in a report prepared by a task force of educators, doctors, politicians and business people. According to the report, a fourth of the nation's 12 infants and toddlers live in poverty. As many as half confront risk factors that could harm their ability to develop intellectually, physically and socially. Child immunizations are too low, more children are born into poverty, more are in substandard care while their parents work and more are being raised by single parents. When taken together, these and other risk factor can lead to educational and health problems that are much harder and more costly to reverse.

16 The crisis beings in the womb with unplanned parenthood. Women with unplanned pregnancies are less likely to seek pre-natal care. In the U.S. 80% of teenage pregnancies and 56% of all pregnancies are unplanned. The problems continue after birth where unplanned pregnancies and unstable partnerships often go hand in hand. Since 1950, the number of single parent families had nearly tripled. More than 25 percent of all births today are to unmarried mothers. As the number of single parent families grows and more women enter the work force, infants and toddlers are increasingly in the care of people other than their parents.

- A. Low birth weight babies
- B. Unwed mothers
- C. Orphaned children
- D. Teenage mothers
- E. None of these

Most disturbingly, recent statistics show that American parents are increasingly neglecting or abusing their children. In only four years from 1987-1991, the number of children in foster care increased by over 50 percent. Babies under the age of one are the fastest growing category of children entering foster care. The crisis affects children under the age of three most severely the report says. Yet, it is this period- from infancy through preschool years- that sets the stage for a child's future.

The main focus of the passage is on the plight of

17 ANTIPATHY

- A. Liking
- B. Pathetic
- C. Provocation
- D. Bluntness
- E. Venom

18 Maria forced herself to eat every piece on her plate; although she found the food practically-----.

- A. Delicious
- B. Spicy
- C. Inedible
- D. Nourishing

19 BEWILDERED

- A. Confused
- B. Dedeveled
- C. Discarded
- D. Neglected
- E. Sabotage

20 RECALCITRANT

- A. Submissive
- B. Maladroit
- C. Audacious
- D. Travail
- E. Divert
