

## PPSC Computer Science Chapter 7 ASP.NET Online Test

| Sr | Questions                                                                                                   | Answers Choice                                                                                                  |
|----|-------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| 1  | In ASP NET the < authorization > section contain which of the following elemetns.                           | A. < Deny ><br>B. < allow><br>C. Both A and B<br>D. None                                                        |
| 2  | Which of the following is not a member of ADODB command object.                                             | A. Execute Reader<br>B. Execute scalar<br>C. Execute Stream<br>D. Open                                          |
| 3  | Which of the following is not a member of connection object.                                                | A. Execute<br>B. End transaction<br>C. Begin Transaction<br>D. Open                                             |
| 4  | Which of the following allow writing formatted output.                                                      | A. Response write()<br>B. Response output write ()<br>C. Both A and B<br>D. None                                |
| 5  | Which of the following extension does a web service file will have.                                         | A. Asmx<br>B. Aspx<br>C. Ascx<br>D. Resx                                                                        |
| 6  | Client certificate is a collection of                                                                       | A. Server<br>B. Response<br>C. Collection<br>D. Request                                                         |
| 7  | Which method do you invoke on the Data Adapter control to load your generated data set.                     | A. Fill ()<br>B. Executeuery ()<br>C. Read ()<br>D. None                                                        |
| 8  | Why si Global asax is used.                                                                                 | A. Implement application and session level events.<br>B. Declare Global variables<br>C. Both A and B<br>D. None |
| 9  | Which of the following denote new data bound controls used with ASP NET.                                    | A. Grid view<br>B. Form view<br>C. St data source<br>D. All above                                               |
| 10 | can a dil run as stand allows application.                                                                  | A. No<br>B. Yes<br>C. Sometime we can make it by introducing some code<br>D. None                               |
| 11 | It is developer of ASP NET defines style information in a common location. Then that location is called as. | A. Master page<br>B. Theme<br>C. Customization<br>D. None                                                       |
| 12 | Which of the following de note value that can be taken by cache control of ASP NET.                         | A. Public<br>B. Private<br>C. no cache<br>D. All above                                                          |
| 13 | How do you trae the application -End event on runtime.                                                      | A. By debugging<br>B. By Tracing<br>C. Can not be done<br>D. None                                               |
| 14 | The Grid view control in ASP NET has which of the following features.                                       | A. Automatic data binding<br>B. Automatic paging<br>C. Both A and B<br>D. None                                  |
| 15 | What is the out of following code string a="Hello" string b="Word " string c= a+b REsponse write ("C")      | A. Hello world<br>B. C<br>C. A+ b<br>D. ..                                                                      |

|    |                                                                                                       |                                                                                              |
|----|-------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|    |                                                                                                       | D. None                                                                                      |
| 16 | Which of the following can be used to debug NET application.                                          | A. System diagnostics classes<br>B. Runtime debugger<br>C. Visual studio NET<br>D. All above |
| 17 | Which control supports paging                                                                         | A. Repeater<br>B. Data grid<br>C. Both<br>D. None                                            |
| 18 | ASP drop down list > tag replaces which of the HTML tags                                              | A. < Option ><br>B. < Select ><br>C. < List ><br>D. None                                     |
| 19 | Find the term The NET frame work which provides automatic memory management using a technique called. | A. Serialization<br>B. Garbage Collection<br>C. Assemblies<br>D. Overriding                  |
| 20 | The number of forms that can be added to a aspx page is                                               | A. 1<br>B. 2<br>C. 3<br>D. 4                                                                 |
