Maths (New Book) - 10th Class Mathematics English Medium Chapter 6 Preparation

Q1. How to draw an ogive ?

Ans 1:

Q2. Define Arithmetic mean.

Ans 1:

Q3. Calculate mean for 10,15,20,25,30,35.

Ans 1:

Q4. What is frequency polygon ?

Ans 1: It is a closed geometric, figure used to display a frequency distribution graphically.

Q5. Define Mode.

Ans 1: Mode is defined as the most frequent occurring observation in the data. It is the observation that occurs maximum number of times in given data.

Q6. Define frequency distribution.

Ans 1: A frequency distribution is a tabular arrangement for classifying data into different groups and the number of observations falling in each group correspondence to respective group.

Q7. What steps are involved in making a discrete frequency distribution ?

Ans 1:

Q8. Define standard deviation.

Ans 1:

Q9. Define Median.

Ans 1: Median is the measure which determines the middle most observation in a data set. It divides the data set into equal parts.

Q10. Define Geometric mean.

Ans 1:
