Maths (New Book) - 10th Class Mathematics English Medium Chapter 6 Preparation

Q1. Define Median.

Ans 1: Median is the measure which determines the middle most observation in a data set. It divides the data set into equal parts.

Q2. What is meant by grouped data ?

Ans 1: The data presented in the form of frequency of distribution is called grouped data.

Q3. Calculate mean for 10,15,20,25,30,35.

Ans 1:

Q4.

Ans 1:

Q5. What steps are involved in making a discrete frequency distribution ?

Ans 1:

Q6. Define Arithmetic mean.

Ans 1:

Q7. What are class boundaries ?

Ans 1: The real class limits of a class are called class boundaries.

Q8. Define frequency distribution.

Ans 1: A frequency distribution is a tabular arrangement for classifying data into different groups and the number of observations falling in each group correspondence to respective group.

Q9. Define standard deviation.

Ans 1:

Q10. Write down the formula for calculation of Arithmetic mean.

Ans 1:
