

Mathematics (English Medium) - 5th Class Math English Medium Chapter 7 Short Questions

Q1. How many right angles are there in a straight angle.

Ans 1: There are two right angles in a straight angle.

Q2. What is the sum of all internal angles of a triangle.

Ans 1: The sum of all internal angles of a triangle is 180 Degree

Q3. What is the quantity of each angle in an equilateral triangle.

Ans 1: Each angle of an equilateral triangle is equal to 60 Degree

Q4. Can two straight angles be the supplement of each other? Explain your answer.

Ans 1: Two straight angles cannot be the supplement of each other because sum of two straight angles is not equal to 180 Degree

Q5. How many right angles are there in a straight angle.

Ans 1: There are two right angles in a straight angle.

Q6. Define obtuse angle triangle.

Ans 1: A triangle in which one angle is obtuse is called an obtuse angled triangle.

Q7. Describe at least two properties of each

Ans 1:

Q8. How many vertices does a cube have.

Ans 1: A cube has 8 vertices.

Q9. How many 30 Degree angles are there in a right angle.

Ans 1: As $90 \text{ Degree} = 30 \text{ Degree} + 30 \text{ Degree} + 30 \text{ Degree}$ so there are 3 angles of 30 Degree in a right angle.

Q10. How many types of triangles are there with respect to their sides and angles.

Ans 1: There are 3 types of triangles with respect to their sides and angles.
