Computer Science - ICS Part 1 Computer Science Chapter 4 Short Questions Preparation

Q1. Define the term video conferencing

Ans 1: Video conferencing is a type of conferencing in which video cameras and microphones capture sight and sound transmission over network.
Benefits:
Reduced travel time and cost
Optimised Attendence
Increase productivity
Employee Retention
Sustaine competitive advantage

Q2. What is computer simulation?

Ans 1: A computer simulation is a special type of computer model,which recreates as system that might exist outside the computer.Simulation are often used to train peoples how to deal with situations that are diffcult ,expensive or dangerous to recreats and practice for real.

Q3. How computer can be used in departmental store

Ans 1: People at the store level, cashiers enter sales data into sake terminals by waving a bar code scanner across a Recod of sales are input to the store's computer and used for accounting , restocking store inventory, and weeding out products that sell well.

Q4. What is E banking?

Ans 1: An electronic banking is also known as cyber banking or online includes various banking activities conducted from home.a busniness,or on the road instead of a physical bank location.

Q5. What is E banking.

Ans 1: An electronic banking is also known as cyber banking or online includes various banking activities conducted from home, a business, or on the road instead of a physical bank location.

Q6. How Computer used in weather forcasting?

Ans 1: Computer based weather forecasting depends upon accurate collection of data from weather station,airports,satellites ,different sensitive devices.Once the data is collected then computer model generates a forecast of how the air will change.SPARCO weather forecasting department offer analysis of live weather data.

Q7. How CAM works.

Ans 1: CAM is used to control all part of manufacturing process.CAM software used digital design output,such as that from a CAD system,to directly control producting machinary.

Q8. Write the purpose of document managment system.

Ans 1: DMS include work process,dekstop,publishing,reprographic image processing and archival storage application word processing enable document to be create and edited electronically.Desktop publishing enable to make document in attrachirs form.

Q9. What is online education?

Ans 1: Online Education os defined as the creation and proliferation of the personal computers the globalizaton of ideas and other human acts and the use of technology in exchanging ides and providing access to more people.

Q10. Differentiate between CAD and CAM.

Ans 1: CAD:
CAD stands of computer Aidded design
CAD are used for display designs and build production prototypes in software
CAD has many different application some of them like designing new car or aircraft bridge and building.

Ans 2: CAM:
CAM is stands of computer Aided manufacture
CAM us used to control all process
CAM software used digital design output. Such as that from a CAD system, to directly control production machinery.
