Computer Science - ICS Part 1 Computer Science Chapter 9 Short Questions Preparation

Q1. What are function in MS-Excel?

Ans 1: Function are build in formulas used to perform complex operation.Function can be used in formula.Functions can be more difficult way to performing mathematical operations their formula.
Example: sum,average,Max.Min,Sort etc

Q2. Define Worksheet.

Ans 1: In the document window the document is displayed.In a spreadsheet,you can actually work in a grid of rows and column called worksheet.

Q3. Write function that totals cell B3 through B10.

Ans 1: Function :
=SUM(B3:B10)

Q4. What is mean by Cell Refrence?

Ans 1: A cell reference tells formula to look up the content of the referenced cell.This increase the flexibility of the formula.

Q5. What is 3D-Sheet?

Ans 1: The work book could contain just one work sheet.New spread sheet are related as 3D work sheet which are like a pad of worksheets,It is due to this feature that the data in one worksheet can be used for calculation performed in another worksheet of the same or a different workbook.

Q6. What is Relative cell?

Ans 1: Calling cells by just their address(Such as A1) is called relative referencing and it is copied from one cell to an other,the spreadsheet does not create an exact copy of the formula.

Q7. What do you understand by the term of named ranges?

Ans 1: Named ranged: are names that you define present a cell or cell range on a worksheet.

Q8. What is cell?

Ans 1: Cell is the basic unit where data is entered in a work sheet,The data can be take variety of forms i.e text,numbers,dates and formulas.The cell can also hold graphics,audio files and video or animation.

Q9. What is Spread Sheet?

Ans 1: Spread Sheet :A spread sheet program is a software tool for entering,calculating,manipulating and analysing set of numbers.The specially of spread sheet software is working with numbers.It can hold large amount of data arranged in rows and column.

Q10. Differentiate between formula and function?

Ans 1: Function: Function is build in formula used to perform complex operations,Function can be used in different formulas.

Ans 2: Formula:A set of forms of word,as for stating or declaring something definitely or authoritatively for indicating procedure.
